#### DETAILED ACTION

THE FINALITY OF THE LAST OFFICE ACTION IS HEREBY VACATED.

2. Applicant's Response to Office Action, received 20 January 2009, is acknowledged.

Claims 1, 7, 21, 27 and 28 have been amended. Claims 6 and 26 have been canceled.

- Claims 1-5, 7-15, 21-25 and 27-35 are pending. Claims 13-15 and 33-35 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention.
- Claims 1-5, 7-12, 21-25 and 27-32 are under consideration.

#### Rejections Withdrawn or Moot

- The rejection of claims 1-5, 10, and 21-25 under 35 U.S.C. 102(e) as being anticipated by Perl (U.S. Pat. No. 5,879,909), is withdrawn in light of the amendments of the claims.
- The objection to claims 7-12 and 27-32, being dependent from rejected claims, is withdrawn.
- The objection to claims 6 and 26, being dependent from rejected claims, is moot in light of the cancellation of the claims

### Claim Rejections - 35 USC § 102

8. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- Claims 1, 7, 10 and 11 are rejected under 35 U.S.C. 102(b) as being anticipated by Frazer et al (WO98/23635, 4 June 1998).

Newly amended claim 1 is drawn to a chimeric peptide of formula (I) or (II) or mixtures of (I), or (II), or (I) and (II). N is designated as being 2, 3, 4, or 5 amino acids, C is designated as being 2, 3, 4, or 5 amino acids. S is a spacer amino acid residue,  $T_h$  is a promiscuous T helper cell epitope, m is 0-5 and n is 1-4.

The recitation in the claims that N originates from the free N-terminus of a naturally occurring internal peptide cleavage product formed by proteolytic cleavage of a precursor protein or mature protein, or that C is the last 2-5 amino acid residues from the free C-terminus of a naturally occurring internal peptide cleavage product that is formed by proteolytic cleavage of a precursor protein or a mature protein is merely a product by process, and does not place any patentable structure characteristic on the final product, i.e., the claimed chimeric peptide, which would differentiate the claimed peptides from peptides made by another process.

Frazer et al teach a chimeric peptide of formula (I), i.e., 2-4 amino acids attached to a promiscuous T helper cell epitope (Abstract; page 9, lines 5-16; page 9, line 28 to page 10, line 3). Frazer et al teach that the promiscuous T helper cell epitope may be from a variety of sources, e.g., tetanus toxin, *Plasmodium falciparum* circumsporozoite protein, measles virus F protein (page 4, lines15-30). Frazer et al teach composition to generate an immune response (Abstract; page 33, line 1 to page 40, line 14

## **Claim Objections**

10. Claims 2-5, 8, 9 and 12 are objected to because they depend from rejected claims.

#### Conclusion

 Claims 1-5 and 7-12 are not allowed. Claims 21-25 and 27-32 appear to be free of the prior art. Art Unit: 1645

12. Any inquiry concerning this communication or earlier communications from the Examiner should be directed to Rodney P. Swartz, Ph.D., Art Unit 1645, whose telephone number is (571) 272-0865.
